

3.8 Bale Breaker

The Peat Fluffer is ideal for decompressing or "fluffing" 3.8 cubic foot bales of compressed peat or pre-mix media. The fluffer's rotating tines uniformly break up chunks of peat as they pass from the loading area to the discharge at the top of the incline. The optional watering bar enables the desired amount of moisture to be added and helps to maximize the yield of the bale. Optional adjustable caster wheels allow the fluffer to be easily moved to service multiple filling machines. Consistent media, increased compressed bale yield, and labor efficiency combine to make the peat fluffer a valuable tool for the grower who uses 3.8 cubic foot bales

SPECIFICATIONS	OPTIONS	FEATURES
10FT x 14IN CLEATED INCLINE CONV.	CUSTOM CONVEYOR LENGTHS	HEAVY-DUTY ROTARY TINES
220VAC, SINGLE OR 3 PHASE	CASTER WHEELS	SEALED BEARINGS
BALE HANDLING SHELF	ELECTRONICALLY CONTROLLED	DIRECT DRIVE GEARBOXES
	WATERING BAR
