PACK MANUFACTURING COMPANY PM510 PREMIUM POT & TRAY FILLER

The Pack Manufacturing PM510 Premium Pot & Tray Filler is the newest evolution of the Pack Mfg. Equipment Line. The PM510 will allow you to coast past the competition in luxury. Every aspect of the machine has been fine-tuned to cut costs and increase user production. The PM510 is a compact filler with a 1.6 cubic yard hopper, compacting vibrator, variable speed filling conveyor, variable speed heavy drag chain soil feed, and auger soil return to capture unused media- all on a small frame with casters. The PM510 also hosts an automatic height adjusting rotary brush and compacting sweep, both of which are calibrated at the push of a button. Once you set your machine to the proper settings for a container, you can save those settings via the touchscreen controller. You can name your settings and recall them next time you run that container again. **With the press of a single button your entire machine will automatically calibrate itself in less than 30 seconds!** Conveyor speed, soil delivery speed, rotary brush height, and compacting sweep height are all set automatically. Before you can fetch your containers, the machine will be calibrated for use. The PM510 comes standard with touchscreen controls and 20 storage configurations, enough to store the perfect setup for plenty of different tray and pot sizes. The Pack Manufacturing PM510 also has plenty of customization options to meet any needs you have.
