

**PACK MANUFACTURING COMPANY
PM1210 HORIZONTAL BALE BREAKER**

If you are using compressed peat moss, coir, or premixed substrate, then the Pack Manufacturing PM1210 Bale Breaker is for you. Just place the palletized bale of peat or coir on the platform. The steel chain flight lifts the bale into the harrow and evenly extracts the contents, layer by layer. The steel chain flight feeds the bale into the vertical scraper that takes off thin layers of the peat or premixed substrate. The Pack Manufacturing PM1210 Bale Breaker will produce a consistent texture and flow throughout the entire bale. Pack Mfg. Bale Breakers are the ideal solution to decompressing palletized peat moss or coir. Compressed peat moss has many advantages in shipment and storage, however, when it comes to potting and growing, compressed peat moss has many disadvantages. Thawing frozen peat bales is time consuming, and compacted peat requires more water and produces heavier pots. Fluffed peat is better for mixing, watering, and filling containers. Water bars are standard on every Pack PM1210 Bale Breaker. The Pack Manufacturing Bale Breaker series is undoubtedly the best process for compressed bale yield with the ability to control moisture content and product integrity.

SPECIFICATIONS	FEATURES
230 VAC, SINGLE OR 3 PHASE	BULK MATERIAL LOW LEVEL SENSOR
MAX BALE SIZE: 59" W x 56 3/4" D x 113" H	AUTO WATER APPLICATION
OUTER DIMENSIONS: 88" W x 132" D x 106" H	HYDRAULIC LIFT GATE
OUTPUT UP TO 1100 CUBIC FEET PER HOUR	VARIABLE SPEED MOTORS FOR PRECISION CONTROL
WEIGHT: 5,500 LBS	ENCLOSED DESIGN REDUCES DUST PARTICLES
