

PACK MANUFACTURING COMPANY POT WATERING CHAMBER

Pot Watering chambers are perfect for bareroot planting and potting fruit and ornamental trees and large shrubs.

Pack Manufacturing Watering Chambers are extremely high-volume, high speed watering solutions for any container plants and can be custom fit into any production line. The side mounted water bars do not obstruct larger plants, allowing even the largest transplants to be watered in a production line. Pack Mfg. Watering Chambers incorporate water conservation practices by only turning on the water flow once plants are in-line.

Pack Mfg. Watering Chambers can be customized with variable speed controls, extended conveyor sizes, chemical additives, fertilizer hoppers, or custom dimensions. Adding automated watering solutions is a great final step in many planting operations- keeping plants clean and hydrated prior to transport or watering following potting to “water in” the plant roots and remove dirt from the containers.
